

**EPS
Packaging**

Providing outstanding
protection and
thermal performance

Packaging Solutions

Sunpack, part of the European Sunde Group, designs, manufactures and supplies insulating and protective EPS packaging. Our EPS boxes are certified food safe for use with fresh fish, meats, fruits and vegetables for Home Delivery, restaurant supply and export. We also supply our EPS packaging for fragile and temperature sensitive goods such as pharmaceuticals, electronics and planting trays for horticulture.

Offering expert design and technical advice on all aspects of its products and applications, Sunpack applies its specialist product experience to develop innovative packaging solutions, to clients bespoke requirements.

The company has built an outstanding reputation for quality, value and customer service and from its various sites in Scotland and the North East supports the fresh meat and fish industry with all its transit packaging requirements.

EPS Benefits

Excellent thermal performance

EPS has exceptionally low thermal conductivity due to its closed cell structure, helping keep perishable food fresher for longer as well as reducing the possibility of food wastage from temperature degradation. EPS packaging is proven to be effective whether distribution is by land, sea or air.

Impact protection and strength

EPS has extremely high shock absorbency characteristics and exceptional mechanical/compressive strength, ensuring the protection of delicate foods such as fish, meats, soft fruits and tender vegetables.

Versatility and bespoke design

Sunpack's experienced design team will demonstrate the potential offered by its range of moulded EPS packs as well as advise on the wide variety of bespoke design options.

Lightweight

EPS is 98% air, making it one of the lightest packaging materials, bringing significant benefits regarding handling, transportation and transit fuel costs.

Moisture resistant and rot proof

Rot proof and non-hygroscopic, EPS does not readily absorb or retain moisture from the atmosphere; crucial characteristics in the selection of packaging materials for fresh produce.

Environmentally safe and recyclable

Sunpack's EPS packaging is non-toxic, inert and contains no CFCs or HCFCs. Certified food safe, it is odourless and tasteless and does not support fungal, bacteriological or animal growth. EPS is 100% recyclable.

Own brand options

The smooth surface of EPS is suitable for printed or embossed corporate and product branding as well as adhesive labelling for ease of identification or promotional use.

Accreditations

All raw materials used in producing our EPS boxes are sourced from manufacturing plants which operate in full compliance with Environmental Management System ISO 14001.

All our manufacturing sites are accredited to Global Quality Management Standard ISO 9001 assuring you of our commitment to quality in every part of our business.

We also operate the Environmental Management and Audit Scheme (EMAS) to ensure that all relevant laws and regulations are adhered to and continuous environmental improvements are achieved.

Product Range

Sunpack offers a wide range of standard sized EPS Boxes readily available direct from our manufacturing sites. We also work with clients to design bespoke packaging solutions where required

Sunpack Product Range		Internal Dimensions (mm)			External Dimensions (mm)
